AOAC SEA Student Lab Tours

As laboratory scientists and managers, we understand that access to industrial experience help students clarify their career goals, develop visions and skills beneficial to their future careers, and maximize their learning experience at school. Initiated by the collaboration with National University of Singapore - American Chemical Society Student Chapter (NUS ACSSC) Industrial Strategy Group, AOAC SEA Training of Young Scientists Working Group (ToYS WG) is driving an initiative to provide lab tours to university students.

AOAC SEA Student Lab Tours aim to provide industrial exposure to university students with an emphasis on kinds of working environments and bridge the gap between curriculum and industry. In the 1st phase, AOAC SEA Student Lab

Tours will arrange tour hosts located in Singapore for NUS students. Once this is successful, we will expand to the 2nd phase for other countries and universities.

If you and your institution would like to meet with the next generation talents, guide them on how to thrive at institutions like yours, and help them see how the pieces fit together, volunteer to be a host of the lab tour and/or sponsor for this initiative. Join us to make a positive impact through this corporate social responsibilities (CSR) initiative!

AOAC SEA at MIFT Food Analyst Symposium 2024

AOAC SEA was invited to give a talk at the MIFT Food Analyst Symposium 2024. The event aimed to congregate food analysts in Malaysia in a single event, update food analysts on latest national regulations and global developments in test methods, and encourage development of the field and human resources.

Dr Huei Hong Lee, a member of AOAC SEA Leader Team, gave a talk on "Overview on AOAC SMPR Development and Method Harmonization for Food Analysis." The talk was well received and helped increase awareness about AOAC SEA section and AOAC SMPR development process. The event attracted about 110 food analysts, together with key speakers from Ministry of Health of Malaysia.

Thank you Dr. Huei Hong Lee and Dr. Qi Lin for representing AOAC SEA at the event!

2024**

“ The ITDI is among the instrumentalities that laid the groundwork, in the early years, for S&T in the country. Today, it is one of the DOST's RDIs (research and development institutes) and undertakes multidisciplinary industrial R&D, technical services, and knowledge translation or technology transfer and commercialization.

The Standards and Testing Division (STD) of DOST-ITDI uses AOAC standard methods in the conduct of analytical testing to provide public service to the public and stakeholders in the Philippines for raw materials and product quality and safety for compliance to specifications and regulations. Membership to the AOAC SEA will help the Institute to gain benefits for method harmonization, standardization and quality assurance.
